## **DETAILED ACTION**

### ***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the desiccant being pumped through the heat exchanger, as claimed in claims 9 and 81 and the direct heat transfer of claim 1 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1,4-10 and 72-82 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The 8-13-2007 amendment amended claim 1 to claim that the liquid desiccant in the one reservoir is directly cooled by at least one fluid. This cannot be found in the original specification. The 8-13-2007 remarks cite three places where this could be found in the specification, but none of the three citations clearly state that the heat exchange is direct. Direct heat exchange is a term of art meaning that the objects or fluids exchanging heat contact each other, with no solid or fluid between. Lines 7 and 8 of page 5 state that direct (evaporative) heat exchange can be used to cool the air, but the desiccant is not discussed. Lines 23-32 of the same page do not discuss methods of heat transfer, other than the pipe losses of the transfer. The cite from page 14 states that air can be used to cool the desiccant in the heat exchanger, but does not state that the heat exchange can be direct. Page 6 states that the air can be used to cool other air directly, or indirectly by cooling the desiccant, but does not state that the desiccant can be directly cooled. Claims 4-10 and 72-82 depend from claim 1, so they are rejected due to this dependency.

***Allowable Subject Matter***

Claims 25-30,32,34 and 36-38 are allowed.
